

MEDICAL SUPPORT PROJECT / 3.4 / PROJECT FULLY FUNDED

Hydraulic shower trolley

INNOW C213HS for bedridden and reduced-mobility patients

Model image shown for illustration.

Project budget

3 400 EUR

Safe transfer and dignified hygiene care for patients who cannot use a conventional shower independently.

Why it is needed

For people confined to bed by injury or a serious medical condition, routine hygiene can become painful and unsafe. Traditional transfers also place a significant physical burden on healthcare staff.

The shower trolley combines the functions of a mobile stretcher and a bath. It supports the patient's dignity, improves safety and makes daily care easier for clinicians and carers.

What the equipment provides

- Foot-pedal hydraulic height adjustment for safer patient transfer.
- Stainless steel frame and side rails for regular contact with water and disinfectants.
- Soft waterproof platform and folding safety rails.
- Flexible drain hose for quick and controlled water removal.

Procurement package

- Hydraulic chassis with height adjustment.
- Waterproof PVC bath platform.
- Waterproof patient head cushion and drain hose.
- Safety rails and corner impact bumpers.
- Specialised delivery to the medical facility.

Budget breakdown

Equipment	3 300 EUR
Delivery	100 EUR
Total	3 400 EUR

PROJECT FULLY FUNDED

Fully funded

Fully funded

We sincerely thank Caritas Archidiecezji Krakowskiej for fully funding the hydraulic shower trolley. The organisation is awaiting delivery of the equipment to its warehouse in Poland. Once it arrives, the Foundation will arrange transport to Ukraine. No further support is needed for this project; we invite you to support another current need.
