

MEDICAL SUPPORT PROJECT / 3.4

Multiparameter patient monitor

iM60 Primed - vital signs monitoring

Model image shown for illustration.

Project budget

~3 500 EUR

Continuous monitoring of vital signs in critically and seriously ill patients in operating theatres and intensive care units.

Why it is needed

In intensive care, resuscitation and surgery, a patient's condition can change within minutes. Continuous monitoring helps clinicians detect dangerous changes early and adjust treatment without delay.

The medical facility needs two patient monitors to equip its operating theatres and intensive care units. A compact body and built-in battery maintain observation while a patient is transferred between departments.

What the equipment provides

- Simultaneous monitoring of ECG, non-invasive blood pressure, SpO2, temperature and respiratory rate.
- Colour display and configurable alarms for a rapid clinical response.
- Uninterrupted monitoring during patient transport using the built-in battery.
- Reliable daily operation in intensive care, operating theatres and resuscitation units.

Procurement package

- Two iM60 Primed multiparameter patient monitors or an agreed equivalent.
- Sensors and cables for standard vital signs monitoring.
- Delivery to the medical facility as charitable or humanitarian assistance.

Budget breakdown

Approximately	~3 500 EUR
