

MEDICAL SUPPORT PROJECT / 3.7

Pharmacy refrigerator

Haier HYC-118A - set of 3 units

Model image shown for illustration.

Project budget

4 460 EUR

Accurate and safe storage of temperature-sensitive medicines, vaccines, blood products and reagents at +2 to +8°C.

Why it is needed

Temperature-sensitive products can lose effectiveness or become unsafe when storage conditions are broken. Domestic refrigerators do not provide uniform cooling and may freeze items near the walls.

The Haier HYC-118A has microprocessor control, forced air circulation and alarms. Three compact cabinets can be placed directly in treatment rooms, laboratories and dressing areas.

What the equipment provides

- Stable +2 to +8°C range with control accuracy to 0.1°C.
- Alarms for temperature deviation, open doors and power failure.
- Heated transparent door for stock checks without loss of cold air.
- Backup alarm battery and mechanical lock.

Procurement package

- Three Haier HYC-118A pharmacy refrigerators or an agreed equivalent.
- Temperature verification and basic commissioning.
- Delivery to the medical facility.

Budget breakdown

Approximately	4 460 EUR
