

MEDICAL SUPPORT PROJECT / 3.3

Single-use videobronchoscope

Ambu aScope 4 Broncho with Ambu aView monitor

Model image shown for illustration.

Project budget

~3 200 EUR

A tool for restoring breathing, difficult intubation and airway clearance in critically ill and severely injured patients.

Why it is needed

In critically ill or severely injured patients, swelling, trauma or blood clots can obstruct the airways. A videobronchoscope gives clinicians visual control during difficult intubation and therapeutic procedures.

The single-use device is sterile and ready within seconds, which is especially important in intensive care and the operating theatre.

What the equipment provides

- Support during difficult intubation when standard methods are insufficient.
- Rapid removal of blood clots or secretions obstructing the airways.
- Sterility and reduced risk of cross-infection between patients.
- A portable system for intensive care and operating theatres.

Procurement package

- Single-use flexible Ambu aScope 4 Broncho videobronchoscopes.
- Portable Ambu aView visualisation monitor.
- Cables, adapters and a protective transport case.
- Specialised delivery to the medical facility.

Budget breakdown

Approximately	~3 200 EUR
